

To the Event Coordinator:

I am a member of the Skokie Valley Astronomers, an amateur astronomy club which meets on the second Friday of each month at the Welcome Center of the Edward L. Ryerson Conservation Area. The club website is:

<http://www.SkokieValleyAstronomers.org>

I've given many presentations at the club meetings, and I've created a catalog of presentations that I'd be delighted to present to other groups. The date of each presentation in the catalog indicates the first time that I gave that presentation at my astronomy club. Typically, the older the presentation, the more preparation time I'll need to present it again. I've also given some of these presentations on Astronomy Day at Harper Junior College in Palatine, IL and at Yerkes Observatory star parties in Williams Bay, WI.

Each presentations is designed to:

- be science- and astronomy-related;
- engage an audience interested in science and astronomy, from middle-school age to adults;
- include a slideshow which is mostly images with some text;
- be 40-50 minutes long.

If you would like to include one or more of these presentations in your event schedule, please contact me.

Thank you,
