

To the Event Coordinator:

(Summary: Presentations for your Event Calendar, in-person or via video teleconference.)

I am a member of two amateur astronomy clubs.

Skokie Valley Astronomers: <https://www.SkokieValleyAstronomers.org>

Northwest Suburban Astronomers: <https://www.nsaclub.org/>

I've given many presentations at these clubs and various other venues, and I've created a catalog of presentations that I'd be delighted to present to your group. The date of each presentation in the catalog indicates the first time that I gave that presentation. Typically, the older the presentation, the more preparation time I'll need to present it again. I've also given some of these presentations at Astronomy Day at Harper Junior College in Palatine, IL, at Yerkes Observatory star parties in Williams Bay, WI, and at GLAS (Geneva Lake Astrophysics and STEAM) star parties in Lake Geneva, WI, at libraries, retirement communities, and other venues in my local area.

Each presentations is designed to:

- be science- and astronomy-related;
- engage an audience interested in science and astronomy, from middle-school age to adults;
- include a slideshow which is mostly images with some text;
- be 40-50 minutes long.

If you would like to include one or more of these presentations in your event schedule, please contact me.

I have also given live, interactive online presentations using Zoom, and I would consider giving any of the presentations in my catalog in the same way to your group. I may be able to use a different video teleconference software package, on request, with enough preparation.

Thank you,

Dale Dellutri
